

Linux System Administrator

Evisions, Inc., has an open position for a well-qualified Linux Systems Administrator in the Cayuse office in Portland, Oregon. Our Technical Operations team members are responsible for a demanding and rewarding variety of deliverables to both external customers and various teams within the company. If you are the person for this position, you have a combination of various computer-related technology and programming skills, experience with database systems, experience working with external customers on deployment and professional services tasks, and you have a fun upbeat approach to working with your colleagues.

PRIMARY ACTIVITIES INCLUDE:

- Develop a deep understanding of how our application software systems operate, and be able to explain this to others
- Develop a deep understanding of how to build, deploy and configure our application software systems
- Responsible for building, deploying and configuring systems for customers, including systems deployed at customer locations and systems deployed at our secure co-location facilities
- Responsible for analyzing, defining, designing, building and operating the in-house network, servers and software tools used by developers, operations personnel, sales personnel and management
- Help the team in designing, upgrading and maintaining the infrastructure systems at our secure co-location facility
- Participate under the guidance of the Technical Operations Team Leader, with sales personnel during pre-sales and post-sales interactions with customers as a platform & deployment expert
- Investigate, analyze and make recommendations to management regarding technology infrastructure improvements, upgrades and modifications to ensure that the information technology needs of the company are met over the long-term
- Other duties from time to time as determined by management

QUALIFICATIONS AND REQUIREMENTS:

- 5+ years experience as a systems administrator for Linux/Unix operating systems, including responsibilities requiring System Administrator or root privileges
 - 5+ years experience as a network administrator in mixed Linux / Windows environments for organizations of at least 25 people and/or at least 10 servers, including subnet design, firewall setup, router setup, IP address management, etc.
 - 5+ years experience installing, configuring and using server software applications such as email servers, database servers, web servers, DNS servers, NTP servers, SSH servers, VPN servers, etc. Previous experience working with server virtualization software such as Xen, VMWare, or CloudStack.
 - Proficient in troubleshooting and resolving mixed-environment problems such as mounting Linux NFS drives on Windows clients, viewing Windows shares from Linux/Unix clients, printing from Windows clients to printers on Linux/Unix servers, etc.
 - Previous experience configuring and using any or all of the following highly desirable: Perl, CentOS, Tomcat, Apache https, Postfix, PostgreSQL, Oracle, SQLServer and Puppet or other system configuration management tools.
 - Previous experience developing system administration scripts and/or developing application software highly desirable
 - Experience supporting servers at both local and remote co-location facilities. Experience working with cloud-based facilities, including Amazon EC2, is also highly desired.
